

Sameer Venkatesh Mokhasi
Bachelor of Engineering
Computer Science with business system
BMS College of Engineering, Bangalore

+91-8073225850
sameervenkatesh.bs24@bmsce.ac.in

EDUCATION

-BMS College of Engineering, Bangalore	2024-2027
B.E. Computer Science with Business system	CGPA: 8.0
-KLE C. I. Munavalli, Hubballi	2021-2024
Diploma in Computer Science	Percentage: 94
-Chinmaya English Primary School	2021
Class X	Percentage: 78

EXPERIENCE

-Athreya Technologies private limited	Jan 2024 – May 2024
Network Security Engineer Intern – Spoof Detection & Network Infrastructure	
– Engineered a full-stack spoof detection application using Java Swing and web frontend technologies, reducing false-positive network alerts by centralizing packet visualization across all monitored nodes. Audited and validated 100% of network packet transmissions across communication endpoints using real-time monitoring tools, achieving zero data-integrity failures throughout the 5-month engagement.	
– Key Skills: Git, Java Swing, SQL, Cisco packet, Network Security, TCP/IP	

PROJECTS

-ADAPTIVE TRAFFIC SIGNAL OPTIMIZER	Dec 2025
Multi-Agent AI System & Full Stack Development	
Architected a 4-agent AI pipeline using LangGraph and Claude API to dynamically optimize traffic signal timings, achieving a 28% average reduction in intersection wait times vs fixed-cycle baselines.	
– Technologies: Python, FastAPI, LangGraph, Claude API, React.js, Redis, PostgreSQL, WebSocket, Docker Compose	
– Designed a stateful 4-agent LangGraph pipeline (Ingestion → Congestion Analysis via Claude API → Signal Optimizer → Reporter) processing live vehicle counts every 5 seconds; persisted real-time signal state to Redis and historical cycle logs to PostgreSQL, with results streamed instantly to a React + Recharts dashboard via WebSocket.	
-VOYAGO	Aug 2025 – Dec 2025
Architected a scalable ride-hailing backend (VOYAGO) with FastAPI and PostgreSQL, delivering both on-demand and pre-scheduled “Uber Vacation” booking flows through a modular API design that supports concurrent request handling.	
– Technologies: Node.js, Express, React.js (TypeScript), Prisma, Docker, PostgreSQL GitHub Webhooks, Canvas API	
Designed and implemented RESTful API endpoints with Pydantic data validation models for both ride-on-demand and scheduled booking workflows; integrated WebSocket connections for real-time driver-rider state synchronization, reducing latency in ride acceptance events.	
-FORGECI: DISTRIBUTED CI/CD ENGINE	Apr 2026
– Technologies: Python, React.js (TypeScript), Prisma, PostgreSQL, Docker, JWT, GitHub Webhooks, Canvas API	
Developed a distributed, real-time CI/CD engine featuring a custom master-worker architecture that autonomously ingests live GitHub webhooks and orchestrates automated build pipelines across multiple execution nodes.	
Engineered an intelligent priority-based job scheduler with anti-starvation mechanisms to ensure critical production hotfixes instantly bypass standard feature branches, visualizing the live queue state through a highly interactive React dashboard with custom animations.	

TECHNICAL SKILLS AND INTERESTS

- Languages: C++ - DSA(Proficient), Python, SQL
- Web & Backend: React.js, FastAPI, HTML5, CSS3, Full Stack Development, Docker, WebSocket, Redis, CI/CD
- AI & Machine Learning: LangGraph, Multi-Agent Systems, Claude API, YOLOv8, OpenCV, Isolation Forest, LightGBM, LSTM, SHAP (Explainability)
- Soft Skills: Cross-functional Collaboration, Technical Communication, Product Thinking, Stakeholder Presentation

ACHIEVEMENTS

- Generative AI: Completed 21 specialized GenAI courses covering LLMs, prompt engineering, RAG, and fine-tuning.
- Competitive Programming: Earned CodeTantra badge for completing 10 sessions in competitive programming.
